Sneha Kashyap

Generative AI Engineer | RAG · LLM Applications · LangGraph Workflows
snehakashyap020704@gmail.com | +91-7004671584
LinkedIn | GitHub

Professional Summary

GenAI engineer (B.Tech CSE, KIIT 2026) who ships RAG and LLM workflow applications end to end: document ingestion, FAISS retrieval, LangGraph orchestration, FastAPI serving, and Docker deployment. Shipped three live LLM applications and evaluated retrieval on a 50-query manually labelled set. Co-author of two ML papers, one published at IEEE iSSSC 2025. Seeking a Junior GenAI Engineer role; available immediately.

Education

KIIT University, Bhubaneswar – B.Tech, Computer Science and Engineering 2022 – 2026
Leeds Asian School – AISSCE (Class XII) 2022
St. Joseph's Convent High School – ICSE (Class X) 2020

Technical Skills

Generative AI: LLMs, RAG, Prompt Engineering, AI Agents, LangChain, LangGraph, Embeddings, Semantic Search, Hugging Face Transformers, OpenAI APIs
Retrieval: FAISS, Vector Indexing, Similarity Search, Recursive Chunking, Top-k Retrieval Evaluation
Backend and Deployment: FastAPI, Flask, REST APIs, SQLite, Docker, Git, GitHub, Streamlit, Render
Machine Learning: PyTorch, Scikit-learn, Pandas, NumPy, Random Forest, XGBoost, LightGBM, SHAP, Regression, Classification
Languages and CS: Python, SQL, JavaScript, Java, Data Structures and Algorithms, OOP

Projects

MeetMind AI – Meeting Intelligence Platform September 2026
Python, FastAPI, LangChain, LangGraph, RAG, FAISS, SQLite, Docker GitHub | Live Demo

- Built an AI meeting intelligence platform that processes 60+ real meeting recordings across 10+ categories into searchable summaries, decisions, and action items with due dates.
- Integrated Whisper Large-v3 for speech-to-text and GPT-OSS-20B for summarization, decision extraction, and action items.
- Implemented FAISS-based retrieval using 1,000-character chunks, 200-character overlap, and 384-dimensional all-MiniLM-L6-v2 embeddings; evaluated 50 manually labeled queries, achieving 100% Recall@4 and 25.5% Precision@4.
- Developed FastAPI REST endpoints with SQLite persistence; containerized with Docker and deployed on Render.

AI Research Paper Composer May 2026
RAG, FAISS, OpenAI API, Streamlit, Docker GitHub | Live Demo

- Built a RAG pipeline that ingests 2–5 research PDFs and generates five structured sections using retrieved research context.
- Implemented multi-document retrieval using RecursiveCharacterTextSplitter and FAISS to identify relevant passages from uploaded research papers.
- Added context-grounded prompting and a Streamlit interface; containerized with Docker.

AI Career Copilot July 2026
RAG, LangChain, LangGraph, FAISS, Hugging Face, Streamlit, Docker GitHub | Live Demo

- Built an AI career assistant that analyzes a user's resume and target job description to identify skill gaps, recommend projects, and generate a personalized 12-week learning roadmap.
- Implemented document ingestion, recursive text chunking, FAISS-based semantic retrieval, and all-MiniLM-L6-v2 embeddings through Hugging Face.
- Designed a modular LangGraph workflow (retrieval, memory, skill-gap analysis, structured responses); packaged with Docker.

Experience

CDAC – Trainee Intern May 2025 – July 2025
Python, Flask, SQLite, Chart.js

- Developed a full-stack expense tracker (Flask, SQLite) with expense CRUD, budget tracking, category filtering, and database-backed reporting.
- Built Chart.js dashboards for spending patterns and budget utilization, with input validation to improve data consistency.

Research & Publications

- **Optimizing Bank Marketing Using Machine Learning and Predictive Models** Nov 2025
  2025 IEEE 3rd International Symposium on Sustainable Energy, Signal Processing and Cybersecurity (iSSSC) DOI
  Co-author. Stacked Random Forest and XGBoost on 45,000+ records; improved F1 by up to 6% over the best single model.
- **Global AI Job Trends and Salary Prediction Using Machine Learning** Mar 2025
  Bayesian-optimized LightGBM ($R^2 = 0.89$ held-out); used SHAP to explain salary drivers across 10+ countries.
